

Frequently Asked Questions

Arthritis/Joint Aid is formulated to increase mobility, decrease pain and promote joint and tissue regeneration in pets. It contains the highest quality Glucosamine and Chondroitin as well as a variety of other anti-inflammatory and regenerative ingredients. It is especially good for those pets experiencing pain, stiffness or discomfort from joint problems or other arthritic conditions including degenerative joint disease and hip dysplasia. It may also be used proactively in younger dogs to help prevent the onset of arthritic symptoms.

Relieves Arthritis Pain
Improves Joint Mobility
Glucosamine & Chondroitin

What are the ingredients?

Glucosamine has regenerative properties that strengthen joint and cartilage structures while stimulating the production of collagen, a compound important in wound healing and cartilage repair.

Chondroitin Sulfate works in conjunction with Glucosamine, increasing the production of synovial fluid (the fluid around the joint) attracting healthy nutrients, and adding increased elasticity and fluidity to the joints. It also reduces calcium salt deposits that can increase pain and inflammation. It occurs naturally in many different sources. For maximum efficacy we have used a variety of sources including Gelatin and Green Lipped Mussel (*Perna canaliculus*).

Vitamin C (ascorbic acid) helps boost the immune system and aids in collagen synthesis, providing support for the entire skeletal system.

Citrus Bioflavonoids (from lemon peel) are helpful in the absorption and metabolism of Vitamin C. They assist vitamin C in performing its many functions within the body.

Boswellin improves the blood supply to the joints and prevents the breakdown of connective tissue.

Turmeric reduces histamine levels and increases natural cortisone production by the adrenal glands.

Manganese Ascorbate in combination with Chondroitin sulfate and Glucosamine slows the degeneration of cartilage and helps relieve the symptoms of osteoarthritis.

Is this product safe for daily use?

All the ingredients have been chosen for their safety and efficacy as well as their ability to be used daily to maintain constant, ongoing support.

My dogs hate medicine, how do I make them take it?

Our Arthritis/Joint Aid has been formulated to have the great taste of liver. No other flavorings have been added. Most dogs will readily take the chewable tablets as if they were treats. The pills can also be easily crushed and mixed into food if necessary.

How much should I give my pet?

You should determine the appropriate dose by using the dosage chart provided on the product label. None of the ingredients can cause toxicity or harm to your pets. Any excess in the system will be excreted without ill effects.

How long will it take to see results?

Results have been noticed as early as 1-2 weeks. However, a more typical time is 4-6 weeks. Once improvement is seen, you may reduce the dosage to the low end of the scale for a maintenance level if desired.

Is this supplement OK to give to my cat?

Cats can benefit from our Arthritis/Joint Aid too! The dosage chart goes by weight and the tablets can be cut and crushed to facilitate smaller doses.
